

MK system automates the issue of uniforms without attendants

The MK conveyor issues staff uniforms automatically 24/7

Uniforms are stored securely within the system

No attendant labour is required to issue uniforms

Clean uniforms are hung on rails inside the system

Staff request items using their ID-card and touch screen

A fast pick-off arm travels to locate and automatically deliver requested items

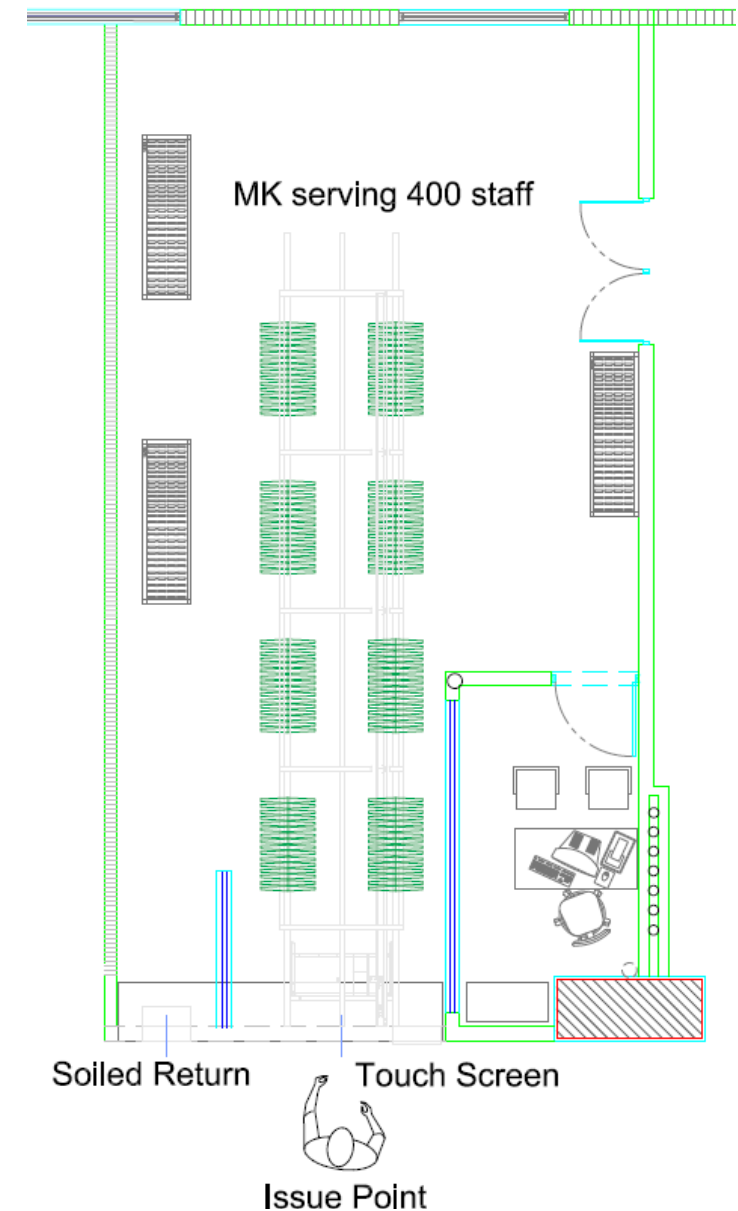

The MK system is typically the fastest uniform delivery system because only the pick-off arm moves to collect garments

Clean uniforms are easily and quickly reloaded

The MK can be reloaded with clean uniforms while still issuing uniforms

Integrated back-up rails are available so excess stock can be tidied away

Soiled items are returned through RFID chip chute

Automated Uniform Delivery

LEF Systems

Uniforms are automatically delivered to the issue point within 20-seconds

The MK has no issue door to open and close saving staff valuable time

Low cost of ownership and fast ROI

System configured through SmartTrack software issued FOC

MK Specification

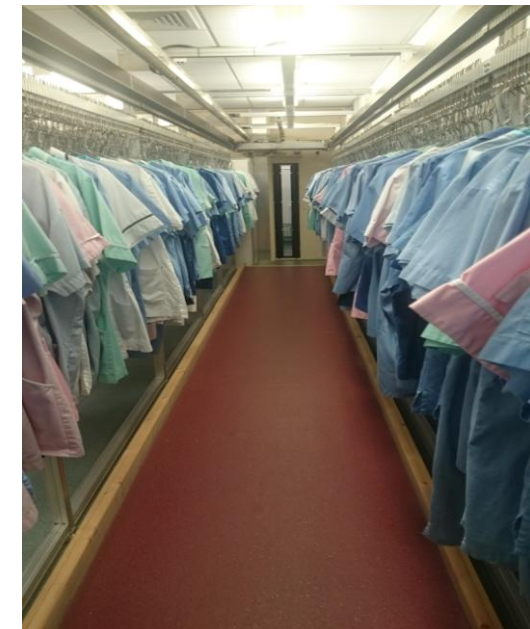

- System issues uniforms automatically 24/7
- Flexible operation - works with/without barcodes labels and RFID chips
