

U-Serve Locker Bag Conveyor

LEF Systems

U-Serve provides automated storage and retrieval of locker bags

The U-Serve conveyor provides employees with automated 24/7 access to their locker bags.

When a user swipes their ID-card the conveyor will rotate to their assigned slot.

The conveyor will stop with their locker bag accessible opposite the access door.

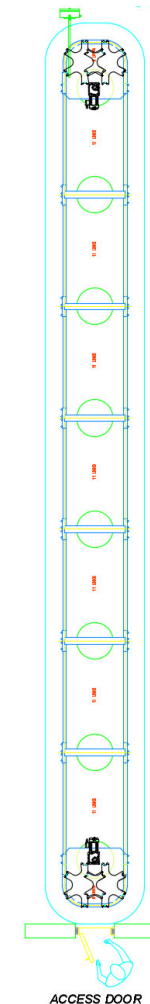

The access door will be released and the employee can open the door and access their locker bag.

Other staff locker bags are locked in position to inhibit their removal.

Locker bags are returned back into the conveyor in the reverse way.

If required, daily uniforms can also be hung on the locker bag so employees can obtain their uniforms with the locker bag.

- ✓ Cost-effective system option
- ✓ System is automatic - no labor is required to issue bags
- ✓ Single access point conveyor for both retrieval and return of locker bags
- ✓ Conveyor can operate with simple staff numbered labels, barcodes or RFID
- ✓ Clean uniforms are loaded at the rear of the conveyor using the loading point
- ✓ RFID can be used to track uniform items loaded and issued
- ✓ No compressed air required – this is an all-electric system
- ✓ Garment tracking software included for tracking locker bags and uniforms
- ✓ Conveyor capacity, shape and size can suit any uniform room requirement
- ✓ Minimal moving parts means higher reliability
- ✓ Enclosed conveyor track - conveyor runs cleaner and safer
- ✓ Locker bag weight capacity is typically 5-8kg
- ✓ Typical conveyor layout shown opposite
