

# Rotary Dispenser

## Automated Clean Uniform Dispensing

The rotary dispenser can securely dispense theatre scrubwear, uniform items, uniform accessories, aprons, towels, lab-coats and disposable items, etc.

Only authorised users with an ID-card can obtain access to clean uniforms. Combined with an optional soiled Receiver chute staff must return soiled items before they can access further clean items. The optional Receiver chute provides credit for returned items, and records a digital image of all returned items which minimises inventory abuse.

By ensuring uniforms are only issued to authorised staff, and that they are securely returned after use, your inventory replacement costs and associated laundry costs can be controlled and minimised.

Staff will no longer be able to hoard uniforms in their locker, unauthorised staff will no longer have access, and staff that require clean uniforms can be confident of obtaining the size they require, when they need it.

The system is easily managed using our Management Software which is provided with each system. Our management software can be used to manage your entire system, staff requirements, inventory and reports.

Dispenser units are available in **Standard** and **Slimline** versions designed to locate conveniently within your facility.

## Rotary Dispenser Specification

- Compartment size 180mm high, 250mm deep, 90mm wide
- 8" user-interface display
- Works with all types of staff ID-card
