

UHF Cabinet Dispenser

UHF Cabinet Tracks and Records
Linen – Scrubwear – Workwear – Sterile Packs – Uniforms

UHF CABINET

UHF Cabinet is a cost-effective solution for tracking and recording the movements of linen, garments, scrubwear, workwear, aprons, uniforms, sterile kits etc. stored within the cabinet.

Typically, different size or types of items are stored together on each shelf allowing staff to easily identify the item they require.

UHF Cabinet can only be unlocked with an authorised staff ID-card. Staff using their ID-card to unlock the cabinet can then remove the item(s) they require.

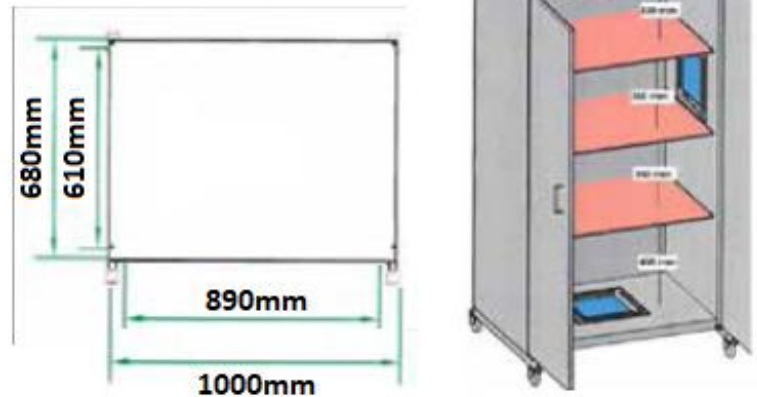

Once Cabinet is re-closed, RFID scanners account for all items remaining within the Cabinet - any items removed are recorded against the applicable users account.

Our supplied management software can be used to authorise users and track items removed.

An optional UHF Receiver can be used alongside the Cabinet to provide credit control so users can only collect a predefined number of items.

UHF Cabinet Specification

Shelf and Standard Configuration

- Automatically registers removed items and records them against users account
- System management software included with system
- Optional: Credit control possible with UHF Receiver
- Capacity: Typically 250-350 items
