

UHF Receiver Chute

Automatically Track and Record Deposited Items

UHF Receiver Chute compliments our range of Dispensing equipment.

The Receiver compliments the Rotary Dispenser, UHF Cabinet, and UHF Cabinet for Clogs, reading the tag within each returned item as they are deposited through the chute.

Items deposited are automatically identified and recorded within the management software.

The Receiver can be used to enforce a credit control restraint so users can only collect a predefined number of clean items before they have to return the soiled items in their possession.

The Receiver automatically generates a credit for the associated user.

UHF Receiver Chute Specification

- UHF Receiver Chute compliments our range of Dispensing equipment
- Automatically reads and records all items deposited
- Automatically generates a credit adjustment for the associated user
- Internal volume: 130 litres
- Rings for internal sack: 340mm x 380mm
